

Week 1 Lab portfolio

Exercise tasks

Today, I get started on learning Nodejs. I am currently using Github and their codespace to create the programs I need to make.

I started with testing using exercise one, which is to copy some lines and to run it to see if everything is set up as it should be.

```
@skeletons →/workspaces/CN5006-web-mobile-lab/CN5006_web_mobile_labs/week1 (main) $ node index
This is my first program
Welcome John your month salary is 500000
```

Afterwards, I did exercise two, which is to do some simple arithmetic operations (which was to add to variables together). I did this in the same program as exercise one.

```
@skeletons →/workspaces/CN5006-web-mobile-lab/CN5006_web_mobile_labs/week1 (main) $ node index
This is my first program
Welcome John your month salary is 500000
The sum of 5 and 3 is: 8
```

Lastly, for the exercises, I did a program that got two inputs from the user. The first one was to get their name and to output it. The second one was an integer and I had to check if the number was either positive, negative or zero and output the correct response for it. Yet again, I did this in the same program as the other two exercises.

```
• @skeletons →/workspaces/CN5006-web-mobile-lab/CN5006_web_mobile_labs/week1 (main) $ node index
This is my first program
Welcome John your month salary is 500000
The sum of 5 and 3 is: 8
starting
Enter your name: tom
Hello, ${name}
Enter a number: 5
The number is positive
```

Portfolio task

For the portfolio task, I had to get two or more numbers and perform a basic arithmetic operation, of the user's choice, on said numbers.

For this, I decided to first get the two numbers, then get and validate the operation.

Afterwards, I did the calculation for the numbers and operation before asking the user if they wanted to continue.

If they said yes, it would move them to a while loop. In said while loop, I asked for another number and operation and did the calculation using the sum of the pervious calculation and the new number and operation before asking the user if they want to continue, and it will continue if they say no.

```
● @skeletons →/workspaces/CN5006-web-mobile-lab/CN5006_web_mobile_labs/week1 (main) $ node portfolio.js
Enter your first number: 5
Enter your second number: 5
Enter your operation (+, -, /, x): +
5 + 5 = 10
Continue (y/n)?y
Enter a new number: 6
Enter your operation (+, -, /, x): -
10 - 6 = 4
Continue (y/n)?y
Enter a new number: 2
Enter your operation (+, -, /, x): /
4 / 2 = 2
Continue (y/n)?y
Enter a new number: 10
Enter your operation (+, -, /, x): x
2 x 10 = 20
Continue (y/n)?n
● @skeletons →/workspaces/CN5006-web-mobile-lab/CN5006_web_mobile_labs/week1 (main) $
```
