Week 4 lab

Exercise	Evidence	What I learned	Challenges /Errors	How I solved them	Key skills developed
Exercise 1		How to connect to mongodb using code and enter a document	Connecting to the db was causing an error	Finding the ip of the codespace I was using and adding it	Connecting to mongodb

Exercise 2			How to insert many documents into mongodb	N/A	N/A	Inserting many values into the database

Exercise 3		How to find multiple documents	N/A	N/A	Fetching multiple documents to view
Exercise 4:		How to find all documents of a specific type	N/A	N/A	Fetching specific documents
Exercise 5		How to count all documents	N/A	N/A	Counting the number of documents
Exercise 6		How to delete many documents	N/A	N/A	Deleting multiple documents
Exercise 7		How to update many documents	N/A	N/A	Updating multiple documents

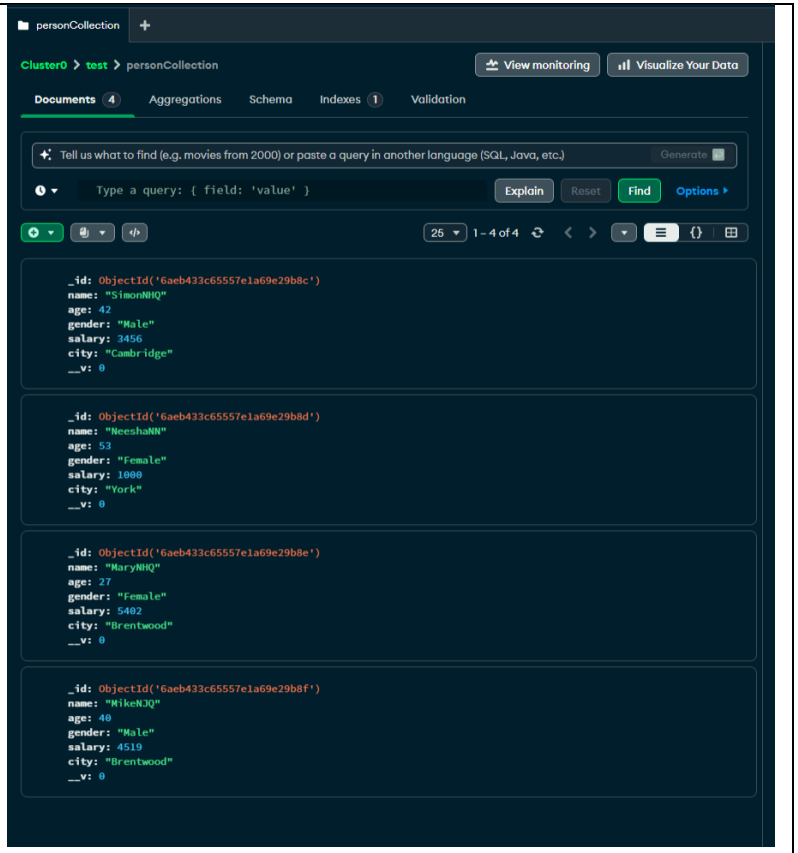

Portfolio	Code screenshots	Execution screenshots
		

```
// insert one values
async function insertOne()
{
    const doc1 = new Person ({
        name: 'NHQ',
        age: 32,
        gender: 'Male',
        salary: 1234,
        city: 'London'
    });
}

// insert many values
async function insertMany()
{
    const manypersons = [
    { name: 'SimonNHQ', age: 42, gender: 'Male', salary: 3456, city: 'Ca
    { name: 'NeeshaNN', age: 53, gender: 'Female', salary: 1000, city: '
    { name: 'MaryNHQ', age: 27, gender: 'Female', salary: 5402, city: 'B
    { name: 'MikeNJQ', age: 40, gender: 'Male', salary: 4519, city: 'Bre
    ];

    const result = await Person.insertMany(manypersons);

    console.log('Many documents inserted.');
    console.log(result);
}
```

```
// find everyone from brentwood
async function findBrentwood()
{
    const docs = await Person.find({
        city:'Brentwood'
    })
    .sort({salary:1})
    .limit(5);
    console.log('People from Brentwood: ');
    docs.forEach(doc=>{
        console.log(doc.age, doc.name, doc.gender, doc.salary, doc.city)
    });
}
```
